NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Prescription psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

NOTE: Any Use of prescription psychotherapeutics is defined as (a) the use of one's own prescription medication as directed by a doctor or (b) misuse of prescription psychotherapeutics. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)*, which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

NOTE: Prescription psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

NOTE: Any Use of prescription psychotherapeutics is defined as (a) the use of one's own prescription medication as directed by a doctor or (b) misuse of prescription psychotherapeutics. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

NOTE: Any Use of prescription psychotherapeutics is defined as (a) the use of one's own prescription medication as directed by a doctor or (b) misuse of prescription psychotherapeutics. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

<sup>1</sup> Tobacco Products include cigarettes, smokeless tobacco (i.e., snuff, dip, chewing tobacco, or "snus"), cigars, or pipe tobacco. Tobacco Product use in the past year excludes past year pipe tobacco use, but includes past month pipe tobacco use.

<sup>2</sup> Daily Cigarette Use is defined as smoking on each of the past 30 days.

<sup>3</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

50 or Older	2.6	2.4	7.2	7.2	8.0	14.0	6.9	5.6	1.6	1.5

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)* which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)*, which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates in the Total column represent all persons in the specified subgroup, including those with unknown past year probation status information.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents with no mental illness may still have received mental health services for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>2</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>2</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>2</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>3</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>4</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>5</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>3</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>4</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates in the Total column represent past year perceived unmet need for all persons in the specified subgroup with AMI, including those with unknown mental health services information.

<sup>2</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>3</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>4</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>5</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>6</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>7</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents could indicate multiple reasons for not receiving mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Estimates in the Total column represent reasons for not receiving mental health services for all persons aged 18 or older with a perceived unmet need for treatment/counseling, including those with unknown mental health services information.

<sup>3</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>4</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Not Receiving Mental Health Services were classified as not having received treatment/counseling for Some Other Reason.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) home management, (2) work, (3) close relationships with others, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>2</sup> Treatment for depression is defined as seeing or talking to a health or alternative service professional or using prescription medication for depression in the past year. Respondents with unknown treatment data were excluded.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) home management, (2) work, (3) close relationships with others, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>2</sup> Treatment for depression is defined as seeing or talking to a health or alternative service professional or using prescription medication for depression in the past year. Respondents with unknown treatment data were excluded.

<sup>3</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>4</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>5</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>6</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>7</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>8</sup> Respondents with unknown health data were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates in the Total column represent all persons aged 18 or older, including those with unknown past year MDE or suicide information.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Respondents with unknown past year treatment data were excluded.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Health Professionals include general practitioner or family doctor; other medical doctor (e.g., cardiologist, gynecologist, urologist); psychologist; psychiatrist or psychotherapist; social worker; counselor; other mental health professional (e.g., mental health nurse or other therapist where type is not specified); and nurse, occupational therapist, or other health professional.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>2</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>3</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>4</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates in the Total column represent all persons aged 18 to 22, including those with unknown enrollment status.

<sup>2</sup> Other Persons include respondents aged 18 to 22 not enrolled in school, enrolled in college part time, enrolled in other grades either full or part time, or enrolled with no other information available.

<sup>3</sup> Respondents with unknown suicide information were excluded.

<sup>4</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>5</sup> Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>6</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>7</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>8</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

<sup>4</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>5</sup> Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>6</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>7</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>8</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Respondents with unknown suicide information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>2</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>3</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>4</sup> Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Alcohol Use Disorder is defined as meeting criteria for alcohol dependence or abuse. Illicit Drug Use Disorder is defined as meeting criteria for illicit drug dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

<sup>5</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>6</sup> Serious Psychological Distress (SPD) is defined as having a score of 13 or higher on the K6 scale in the past year.

<sup>7</sup> Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Prescription psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

NOTE: Any Use of prescription psychotherapeutics is defined as (a) the use of one's own prescription medication as directed by a doctor or (b) misuse of prescription psychotherapeutics. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

NOTE: Any Use of prescription psychotherapeutics is defined as (a) the use of one's own prescription medication as directed by a doctor or (b) misuse of prescription psychotherapeutics. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Any Use of prescription psychotherapeutics is defined as (a) the use of one's own prescription medication as directed by a doctor or (b) misuse of prescription psychotherapeutics. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5<sup>th</sup> edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Major Depressive Episode (MDE) is defined as in the 5<sup>th</sup> edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Illicit Drug Use Disorder is defined as meeting criteria for illicit drug dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)* which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)* which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)*, which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Estimates in the Total column represent all persons in the specified subgroup, including those with unknown past year parole/supervised release status information.

<sup>2</sup> Respondents were asked if they were on parole, supervised release, or other conditional release from prison during the past year.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>2</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Inpatient Mental Health Services is defined as having received inpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>2</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>3</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>4</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>5</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>2</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>3</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>4</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>5</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

Some Other Place <sup>4</sup>	51	70	45	55	26	34	37	42	22	44

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>3</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>4</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

<sup>3</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>4</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)*, which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)*, which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents with no mental illness may still have received mental health treatment for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

<sup>1</sup> Respondents could indicate multiple sources of payment for outpatient mental health services; thus, these response categories are not mutually exclusive.

Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>3</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>4</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>5</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>6</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>7</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Estimates in the Total column represent past year perceived unmet need for all persons in the specified subgroup with AMI, including those with unknown mental health services information.

<sup>2</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>3</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Estimates in the Total column represent past year perceived unmet need for all persons in the specified subgroup with SMI, including those with unknown mental health services information.

<sup>2</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>3</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>1</sup> Respondents could indicate multiple reasons for not receiving mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Estimates in the Total column represent reasons for not receiving mental health services for all persons aged 18 or older with a perceived unmet need for treatment/counseling, including those with unknown mental health services information.

<sup>3</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>4</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Not Receiving Mental Health Services were classified as not having received treatment/counseling for Some Other Reason.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>1</sup> Respondents could indicate multiple reasons for not receiving mental health services; thus, these response categories are not mutually exclusive.

<sup>2</sup> Estimates in the Total column represent reasons for not receiving mental health services for all persons aged 18 or older with SMI and a perceived unmet need for treatment/counseling, including those with unknown mental health services information.

<sup>3</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>4</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Not Receiving Mental Health Services were classified as not having received treatment/counseling for Some Other Reason.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>1</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) home management, (2) work, (3) close relationships with others, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>2</sup> Treatment for depression is defined as seeing or talking to a health or alternative service professional or using prescription medication for depression in the past year. Respondents with unknown treatment data were excluded.

<sup>3</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>1</sup> Estimates in the Total column represent all persons aged 18 or older, including those with unknown past year MDE information.

<sup>2</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

<sup>3</sup> Prescription Psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

<sup>4</sup> Daily Cigarette Use is defined as smoking on each of the past 30 days.

<sup>5</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>1</sup> Estimates in the Total column represent all persons aged 18 or older, including those with unknown past year MDE or suicide information.

<sup>2</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms.

Respondents with unknown past year MDE data were excluded.

<sup>1</sup> Respondents could indicate multiple types of professionals; thus, these response categories are not mutually exclusive. Respondents with unknown type of professional data were excluded.

<sup>2</sup> Estimates in the Total row represent all persons in the specified age group with past year MDE who saw or talked to a professional about depression in the past year, including those with unknown type of professional data.

<sup>3</sup> Other Medical Doctor includes cardiologists, gynecologists, urologists, and other medical doctors that are not general practitioners or family doctors.

<sup>4</sup> Other Mental Health Professional includes mental health nurses and other therapists where type is not specified.

<sup>5</sup> Religious or Spiritual Advisor includes ministers, priests, or rabbis.

<sup>6</sup> Respondents with unknown or invalid responses to the other-specify question on other type of professionals seen for depression were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Respondents with unknown past year treatment data were excluded.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Health Professionals include general practitioner or family doctor; other medical doctor (e.g., cardiologist, gynecologist, urologist); psychologist; psychiatrist or psychotherapist; social worker; counselor; other mental health professional (e.g., mental health nurse or other therapist where type is not specified); and nurse, occupational therapist, or other health professional.

<sup>1</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>2</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>3</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>4</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Respondents with unknown suicide information were excluded.

<sup>1</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>2</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>3</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>4</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>5</sup> The Other Employment category includes students, persons keeping house or caring for children full time, retired or disabled persons, or other persons not in the labor force.

NOTE: Respondents with unknown suicide information were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>1</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>2</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

<sup>3</sup> Prescription Psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

<sup>4</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Respondents with unknown suicide information were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>1</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>2</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

<sup>3</sup> Prescription Psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

<sup>4</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

<sup>1</sup> Estimates in the Total column represent all persons aged 18 to 22, including those with unknown enrollment status.

<sup>2</sup> Other Persons include respondents aged 18 to 22 not enrolled in school, enrolled in college part time, enrolled in other grades either full or part time, or enrolled with no other information available.

<sup>3</sup> Respondents with unknown suicide information were excluded.

<sup>4</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>5</sup> Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>6</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>7</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>8</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

<sup>1</sup> Estimates in the Total column represent all persons aged 18 to 22, including those with unknown enrollment status.

<sup>2</sup> Other Persons include respondents aged 18 to 22 not enrolled in school, enrolled in college part time, enrolled in other grades either full or part time, or enrolled with no other information available.

<sup>3</sup> Respondents with unknown suicide information were excluded.

<sup>4</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>5</sup> Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>6</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>7</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>8</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

<sup>1</sup> Estimates in the Total column represent all females aged 18 to 22, including those with unknown enrollment status.

<sup>2</sup> Other Females include respondents aged 18 to 22 not enrolled in school, enrolled in college part time, enrolled in other grades either full or part time, or enrolled with no other information available.

<sup>3</sup> Respondents with unknown suicide information were excluded.

<sup>4</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>5</sup> Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>6</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>7</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>8</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Respondents with unknown suicide information were excluded.

<sup>1</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>2</sup> Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>3</sup> Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>4</sup> Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Alcohol Use Disorder is defined as meeting criteria for alcohol dependence or abuse. Illicit Drug Use Disorder is defined as meeting criteria for illicit drug dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

<sup>5</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>6</sup> Serious Psychological Distress (SPD) is defined as having a score of 13 or higher on the K6 scale in the past year.

<sup>7</sup> Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop illicit drug or alcohol use, or for medical problems associated with illicit drug or alcohol use.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>2</sup> These services were often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system.

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>2</sup> These services were often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service or reasons for receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

NOTE: Because of revisions in 2017 to the coding of these youth reasons for receiving mental health services variables, these 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents were asked the reasons for the last time they received mental health care from each of the reported mental health services and could indicate multiple reasons for the last time they received mental health care; thus, these response categories are not mutually exclusive. Respondents who did not indicate receiving mental health care from a particular mental health service category for any of the reasons listed in this table were excluded for that service.

<sup>2</sup> Includes treatment/counseling from a (1) private therapist, psychologist, psychiatrist, social worker, or counselor; (2) mental health clinic or center; (3) partial day hospital or day treatment program; or (4) in-home therapist, counselor, or family preservation worker.

<sup>3</sup> Includes treatment/counseling from an overnight or longer stay in a (1) hospital or (2) residential treatment center.

<sup>4</sup> The Reason for Receipt of Mental Health Services includes treatment/counseling from a school social worker, school psychologist, or school counselor but excludes treatment/counseling from a special school or program within a regular school for students with emotional or behavioral problems. Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services or reasons for mental health care from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>5</sup> Includes treatment/counseling from a pediatrician or other family doctor.

<sup>6</sup> Includes services received in foster care or therapeutic foster care.

<sup>7</sup> Includes receipt of any specialty mental health services and receipt of any services from education, medical, or child welfare sources. The Reason for Receipt of Mental Health Services excludes treatment/counseling from a special school or program within a regular school for students with emotional or behavioral problems.

<sup>8</sup> The Received Mental Health Services row represents all youths who received treatment/counseling regardless of whether a reason is known. The level of unknown data in this row is less than the level of unknown data in the reason for receipt of mental health service rows. The reason for receipt of mental health service rows have a smaller denominator compared to the overall received mental health services row due to the larger amount of unknown reason for treatment data.

<sup>9</sup> Respondent self-reported in the other-specify question that he or she has a mental or neurological disorder as a reason for having received mental health services. This reason is one of the most commonly reported other reasons for having received treatment/counseling.

<sup>10</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Receiving Mental Health Services were classified as not having received treatment/counseling for Some Other Reason.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms.

Respondents with unknown past year MDE data were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) chores at home, (2) school or work, (3) close relationships with family, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>2</sup> Treatment for depression is defined as seeing or talking to a health or alternative service professional or using prescription medication for depression in the past year. Respondents with unknown treatment data were excluded.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms.

Respondents with unknown past year MDE data were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) chores at home, (2) school or work, (3) close relationships with family, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>2</sup> Treatment for depression is defined as seeing or talking to a health or alternative service professional or using prescription medication for depression in the past year. Respondents with unknown treatment data were excluded.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms.

Respondents with unknown past year MDE data were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates in the Total column represent all persons aged 12 to 17, including those with unknown past year MDE information.

<sup>2</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

<sup>3</sup> Prescription Psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

<sup>4</sup> Daily Cigarette Use is defined as smoking on each of the past 30 days.

<sup>5</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms.

Respondents with unknown past year MDE data were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Estimates in the Total column represent all persons aged 12 to 17, including those with unknown past year MDE information.

<sup>2</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

<sup>3</sup> Prescription Psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

<sup>4</sup> Daily Cigarette Use is defined as smoking on each of the past 30 days.

<sup>5</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

**Table 9.13B Types of Professional Seen among Persons Aged 12 to 17 with Major Depressive Episode (MDE) or MDE with Severe Impairment in Past Year Who Saw or Talked to a Professional about Depression in Past Year: Percentages, 2016 and 2017**

Type of Professional <sup>1</sup>	MDE (2016)	MDE (2017)	MDE with Severe Impairment <sup>2</sup> (2016)	MDE with Severe Impairment <sup>2</sup> (2017)
<b>TOTAL</b> <sup>3</sup>	100.0	100.0	100.0	100.0
<b>HEALTH PROFESSIONAL</b>	98.6 <sup>a</sup>	96.8	98.8	97.2
General Practitioner or Family Doctor	27.7	28.7	28.8	28.7
Other Medical Doctor <sup>4</sup>	5.6	5.5	6.0	6.6
Psychologist	40.4	37.5	45.0	41.1
Psychiatrist or Psychotherapist	32.5	30.2	35.9	33.7
Social Worker	18.0	17.0	17.9	18.3
Counselor	61.6	61.0	64.8	62.7
Other Mental Health Professional <sup>5</sup>	12.0	10.0	14.5	12.0
Nurse, Occupational Therapist, or Other Health Professional	12.3	11.8	13.1	12.6
<b>ALTERNATIVE SERVICE PROFESSIONAL</b>	10.5	11.7	11.2	12.1
Religious or Spiritual Advisor <sup>6</sup>	8.9	9.8	9.7	10.3
Herbalist, Chiropractor, Acupuncturist, or Massage Therapist	1.9	2.1	1.7	2.0
<b>OTHER PROFESSIONAL</b> <sup>7</sup>	0.5	0.6	0.4	0.8

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents could indicate multiple types of professionals; thus, these response categories are not mutually exclusive. Respondents with unknown type of professional data were excluded.

<sup>2</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) chores at home, (2) school or work, (3) close relationships with family, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>3</sup> Estimates in the Total row represent all persons aged 12 to 17 with past year MDE or past year MDE with severe impairment who saw or talked to a professional about depression in the past year, including those with unknown type of professional data.

<sup>4</sup> Other Medical Doctor includes cardiologists, gynecologists, urologists, and other medical doctors that are not general practitioners or family doctors.

<sup>5</sup> Other Mental Health Professional includes mental health nurses and other therapists where type is not specified.

<sup>6</sup> Religious or Spiritual Advisor includes ministers, priests, or rabbis.

<sup>7</sup> Respondents with unknown or invalid responses to the other-specify question on other type of professionals seen for depression were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Receipt of mental health services for youths is defined as having received specialty or nonspecialty treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Specialty mental health services include outpatient treatment/counseling from a (1) private therapist, psychologist, psychiatrist, social worker, or counselor; (2) mental health clinic or center; (3) partial day hospital or day treatment program; or (4) in-home therapist, counselor, or family preservation worker OR inpatient treatment/counseling from an overnight or longer stay at a (1) hospital or (2) residential treatment center. Nonspecialty mental health services include treatment/counseling (1) from a school social worker, school psychologist, or school counselor; (2) from a special school or program within a regular school for students with emotional or behavioral problems; (3) from a pediatrician or other family doctor; (4) received in juvenile detention centers, prisons, or jails, and often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system; or (5) received in foster care or therapeutic foster care. Respondents with unknown receipt of mental health service information were excluded.

<sup>2</sup> Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop drug or alcohol use, or for medical problems associated with drug or alcohol use.

Source: SAMHSA, Center for Behavioral Health Statistics and Quality, National Survey on Drug Use and Health, 2016 and 2017.

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

<sup>1</sup> Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>2</sup> These services were often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system.

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

<sup>1</sup> Includes treatment/counseling from a (1) private therapist, psychologist, psychiatrist, social worker, or counselor; (2) mental health clinic or center; (3) partial day hospital or day treatment program; or (4) in-home therapist, counselor, or family preservation worker.

<sup>2</sup> Includes treatment/counseling from an overnight or longer stay in a (1) hospital or (2) residential treatment center.

<sup>3</sup> Includes treatment/counseling from a (1) school social worker, school psychologist, or school counselor or (2) a special school or program within a regular school for students with emotional or behavioral problems. Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>4</sup> Includes treatment/counseling from a pediatrician or other family doctor.

<sup>5</sup> Includes treatment/counseling received in juvenile detention centers, prisons, or jails, and often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system.

<sup>6</sup> Includes services received in foster care or therapeutic foster care.

<sup>7</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>8</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service or reasons for receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

NOTE: Because of revisions in 2017 to the coding of these youth reasons for receiving mental health services variables, these 2016 estimates used in the comparisons may differ from estimates published prior to the 2017 NSDUH.

<sup>1</sup> Respondents were asked the reasons for the last time they received mental health care from each of the reported mental health services and could indicate multiple reasons for the last time they received mental health care; thus, these response categories are not mutually exclusive. Respondents who did not indicate receiving mental health care from a particular mental health service category for any of the reasons listed in this table were excluded for that service.

<sup>2</sup> Includes treatment/counseling from a (1) private therapist, psychologist, psychiatrist, social worker, or counselor; (2) mental health clinic or center; (3) partial day hospital or day treatment program; or (4) in-home therapist, counselor, or family preservation worker.

<sup>3</sup> Includes treatment/counseling from an overnight or longer stay in a (1) hospital or (2) residential treatment center.

<sup>4</sup> The Reason for Receipt of Mental Health Services includes treatment/counseling from a school social worker, school psychologist, or school counselor but excludes treatment/counseling from a special school or program within a regular school for students with emotional or behavioral problems. Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services or reasons for mental health care from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>5</sup> Includes treatment/counseling from a pediatrician or other family doctor.

<sup>6</sup> Includes services received in foster care or therapeutic foster care.

<sup>7</sup> Includes receipt of any specialty mental health services and receipt of any services from education, medical, or child welfare sources. The Reason for Receipt of Mental Health Services excludes treatment/counseling from a special school or program within a regular school for students with emotional or behavioral problems.

<sup>8</sup> The Received Mental Health Services row represents all youths who received treatment/counseling regardless of whether a reason is known. The level of unknown data in this row is less than the level of unknown data in the reason for receipt of mental health service rows. The reason for receipt of mental health service rows have a smaller denominator compared to the overall received mental health services row due to the larger amount of unknown reason for treatment data.

<sup>9</sup> Respondent self-reported in the other-specify question that he or she has a mental or neurological disorder as a reason for having received mental health services. This reason is one of the most commonly reported other reasons for having received treatment/counseling.

<sup>10</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Receiving Mental Health Services were classified as not having received treatment/counseling for Some Other Reason.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.  
 NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service or reasons for receipt of mental health service information were excluded.  
 NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.  
 NOTE: Because of revisions in 2017 to the coding of these youth reasons for receiving mental health services variables, these 2016 estimates used in the comparisons may differ from estimates published prior to the 2017 NSDUH.

<sup>1</sup> Respondents were asked the reasons for the last time they received mental health care from each of the reported mental health services and could indicate multiple reasons for the last time they received mental health care; thus, these response categories are not mutually exclusive. Respondents who did not indicate receiving mental health care from a particular mental health service category for any of the reasons listed in this table were excluded for that service.  
<sup>2</sup> Includes treatment/counseling from a (1) private therapist, psychologist, psychiatrist, social worker, or counselor; (2) mental health clinic or center; (3) partial day hospital or day treatment program; or (4) in-home therapist, counselor, or family preservation worker.  
<sup>3</sup> Includes treatment/counseling from an overnight or longer stay in a (1) hospital or (2) residential treatment center.  
<sup>4</sup> The Reason for Receipt of Mental Health Services includes treatment/counseling from a school social worker, school psychologist, or school counselor but excludes treatment/counseling from a special school or program within a regular school for students with emotional or behavioral problems. Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services or reasons for mental health care from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.  
<sup>5</sup> Includes treatment/counseling from a pediatrician or other family doctor.  
<sup>6</sup> Includes services received in foster care or therapeutic foster care.  
<sup>7</sup> Includes receipt of any specialty mental health services and receipt of any services from education, medical, or child welfare sources. The Reason for Receipt of Mental Health Services excludes treatment/counseling from a special school or program within a regular school for students with emotional or behavioral problems.  
<sup>8</sup> The Received Mental Health Services row represents all youths who received treatment/counseling regardless of whether a reason is known. The level of unknown data in this row is less than the level of unknown data in the reason for receipt of mental health service rows. The reason for receipt of mental health service rows have a smaller denominator compared to the overall received mental health services row due to the larger amount of unknown reason for treatment data.  
<sup>9</sup> Respondent self-reported in the other-specify question that he or she has a mental or neurological disorder as a reason for having received mental health services. This reason is one of the most commonly reported other reasons for having received treatment/counseling.  
<sup>10</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Receiving Mental Health Services were classified as not having received treatment/counseling for Some Other Reason.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms.

Respondents with unknown past year MDE data were excluded.

<sup>1</sup> Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) chores at home, (2) school or work, (3) close relationships with family, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

<sup>2</sup> Treatment for depression is defined as seeing or talking to a health or alternative service professional or using prescription medication for depression in the past year. Respondents with unknown treatment data were excluded.

Heavy Alcohol Use <sup>5</sup>	22	19	11	9	17	17

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>1</sup> Estimates in the Total column represent all persons aged 12 to 17, including those with unknown past year MDE information.

<sup>2</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

<sup>3</sup> Prescription Psychotherapeutics include pain relievers, tranquilizers, stimulants, or sedatives and do not include over-the-counter drugs.

<sup>4</sup> Daily Cigarette Use is defined as smoking on each of the past 30 days.

<sup>5</sup> Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>1</sup> Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

<sup>2</sup> Estimates in the Total row represent all persons aged 12 to 17, including those with unknown past year MDE information.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

<sup>1</sup> Receipt of mental health services for youths is defined as having received specialty or nonspecialty treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Specialty mental health services include outpatient treatment/counseling from a (1) private therapist, psychologist, psychiatrist, social worker, or counselor; (2) mental health clinic or center; (3) partial day hospital or day treatment program; or (4) in-home therapist, counselor, or family preservation worker OR inpatient treatment/counseling from an overnight or longer stay at a (1) hospital or (2) residential treatment center. Nonspecialty mental health services include treatment/counseling (1) from a school social worker, school psychologist, or school counselor; (2) from a special school or program within a regular school for students with emotional or behavioral problems; (3) from a pediatrician or other family doctor; (4) received in juvenile detention centers, prisons, or jails, and often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system; or (5) received in foster care or therapeutic foster care. Respondents with unknown receipt of mental health service information were excluded.

<sup>2</sup> Received Substance Use Treatment at a Specialty Facility refers to treatment received at a hospital (inpatient only), rehabilitation facility (inpatient or outpatient), or mental health center in order to reduce or stop drug or alcohol use, or for medical problems associated with drug or alcohol use.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) Structured Clinical Interview for the *Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. Mental illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS]) for half the sample and Sheehan Disability Scale [SDS] for the other half. Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2004 to the logical editing of the outpatient mental health services data, these 2002 and 2003 estimates may differ from estimates published prior to the 2004 NSDUH.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2002 to 2014 estimates may differ from estimates published prior to 2015.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders (MHSS-SCID)* which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*. SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Respondents with no mental illness may still have received mental health services for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons. Mental Illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *Results from the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. Mental illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. Mental illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Because of revisions in 2004 to the logical editing of the outpatient mental health services data, these 2002 and 2003 estimates may differ from estimates published prior to the 2004 NSDUH.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

Mental Health Services Received/Age Group	2008 <sup>1</sup>	2009	2010	2011	2012	2013	2014	2015	2016	2017
<b>ANY MENTAL HEALTH SERVICES</b>	65.7	66.5	67.5	64.9	62.9	68.5	68.5	65.3	64.8	66.7
Inpatient	8.6	8.6	6.7	8.8	6.2	8.3	8.8	7.0	7.6	7.6
18-25	7.9	11.4	8.1	8.0	8.5	10.3	8.2	8.9	8.8	8.6
26 or Older	8.7	8.1	6.4	9.0	5.8	8.0	8.9	6.6	7.4	7.3
26-49	6.9	9.7	7.0	8.0	4.8 <sup>b</sup>	8.4	8.0	7.3	8.1	8.3
50 or Older	12.4	4.9	5.5	10.8	7.3	7.3	10.2	5.5	6.0	5.6
Outpatient <sup>2</sup>	46.2	44.6	42.5	44.1	39.0 <sup>b</sup>	46.9	44.2	43.6	42.6	45.3
18-25	33.0 <sup>a</sup>	38.6	36.2	37.2	35.8	37.3	39.2	36.0	36.8	39.3
26 or Older	48.5	45.5	43.5	45.2	39.5 <sup>b</sup>	48.5	45.2	45.3	44.0	47.1
26-49	48.2	43.8	42.9	42.8	40.3 <sup>a</sup>	47.1	43.8	44.8	44.8	46.7
50 or Older	49.0	49.0	44.6	49.6	38.2 <sup>a</sup>	50.7	47.3	46.0	42.6	47.8
Prescription Medication	59.7	61.1	61.0	58.2	57.8	62.1	61.4	57.3	58.0	58.9
18-25	35.9 <sup>b</sup>	43.4	44.0	41.0	45.5	46.2	42.4	40.0 <sup>a</sup>	41.1	45.7
26 or Older	63.8	63.8	63.8	61.1	59.9	64.8	65.3	61.0	62.1	62.8
26-49	60.1	59.5	61.2	57.2	58.7	60.7	60.1	58.2	59.1	58.5
50 or Older	71.5	72.6	68.4	68.1	61.9	71.3	72.9	65.6	67.4	70.7

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>3</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. Mental Illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions).

NOTE: Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. Mental illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2004 to the logical editing of the outpatient mental health services data, these 2002 and 2003 estimates used in the comparisons may differ from estimates published prior to the 2004 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2004 to the logical editing of the outpatient mental health services data, these 2002 and 2003 estimates may differ from estimates published prior to the 2004 NSDUH.

<sup>1</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2002 to 2014 estimates may differ from estimates published prior to 2015.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

NOTE: Some 2006 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2004 to the logical editing of the outpatient mental health services data, these 2002 and 2003 estimates used in the comparisons may differ from estimates published prior to the 2004 NSDUH.

<sup>1</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2002 to 2014 estimates may differ from estimates published prior to 2015.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>3</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>4</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>5</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>6</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Respondents with no mental illness may still have received mental health services for a past disorder that is in partial or full remission or treatment for a disorder that was not included in the definition of mental illness or for other reasons. Mental Illness estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *Results from the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. Mental illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes persons with any mental disorder that resulted in serious functional impairment. AMI excluding SMI includes persons with any mental disorder that has not resulted in serious functional impairment. Mental illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates used in the comparisons may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple service sources; thus, these response categories are not mutually exclusive.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates used in the comparisons may differ from estimates published prior to the 2017 NSDUH.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2004 to the logical editing of the outpatient mental health services data, these 2002 and 2003 estimates may differ from estimates published prior to the 2004 NSDUH.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

<sup>1</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>2</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

Some Other Place <sup>3</sup>	42	41	58	52	39	55	47	48	45	55

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates may differ from estimates published prior to the 2017 NSDUH.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>3</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>3</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents could indicate multiple locations for receiving outpatient mental health services; thus, these response categories are not mutually exclusive.

NOTE: Outpatient Mental Health Services is defined as having received outpatient treatment/counseling for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Because of revisions in 2017 to the outpatient mental health service estimates, these 2010 to 2016 estimates used in the comparisons may differ from estimates published prior to the 2017 NSDUH.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>2</sup> Respondents were permitted to specify other locations for receiving outpatient mental health services. This location was the most commonly reported other location for receiving outpatient treatment/counseling.

<sup>3</sup> Respondents with unknown or invalid responses to the other-specify question on Some Other Place Received Outpatient Mental Health Services were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<b>RECEIVED ONLY ONE TREATMENT TYPE</b>	1.54	1.39	1.43	1.39	1.28	1.43	1.06	1.10	1.11	1.05
18-25	1.83	1.69	1.73	1.75	1.66	1.65	1.83	1.71	1.73	1.83
26 or Older	1.71	1.56	1.59	1.55	1.45	1.62	1.20	1.24	1.25	1.20
26-49	1.71	1.67	1.72	1.69	1.67	1.72	1.39	1.33	1.28	1.27
50 or Older	3.38	2.92	2.77	2.78	2.60	2.84	2.04	2.28	2.32	2.28
<b>RECEIVED TWO TREATMENT TYPES</b>	1.49	1.34	1.38	1.36	1.26	1.43	1.06	1.11	1.08	1.05
18-25	1.78	1.74	1.70	1.69	1.60	1.61	1.81	1.67	1.72	1.72
26 or Older	1.66	1.49	1.54	1.52	1.44	1.62	1.19	1.24	1.23	1.22
26-49	1.68	1.60	1.67	1.69	1.66	1.72	1.34	1.31	1.29	1.27
50 or Older	3.26	2.85	2.76	2.72	2.54	2.87	2.08	2.27	2.25	2.31
<b>RECEIVED ALL THREE TREATMENT TYPES</b>	0.79	0.53	0.45	0.56	0.51	0.56	0.42	0.47	0.42	0.41
18-25	0.95	1.11	0.77	0.90	0.82	0.87	0.93	0.95	0.95	0.84
26 or Older	0.89	0.58	0.50	0.61	0.58	0.63	0.47	0.52	0.47	0.46
26-49	0.79	0.83	0.65	0.70	0.63	0.70	0.60	0.60	0.57	0.52
50 or Older	1.88	0.69	0.74	1.07	1.09	1.07	0.72	0.91	0.80	0.84

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. Mental Illness estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

50 or Older	0.3126	0.3585	0.9633	0.7802	0.6209	0.2611	0.7464	0.0219	0.6552	

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Mental Illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness includes persons with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness includes persons with any mental disorder that resulted in serious functional impairment. Mental Illness estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

<sup>1</sup> Respondents' AMI and SMI statuses for the 2008 NSDUH are determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI and SMI statuses for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Some 2008 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Any Mental Illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). AMI estimates from 2008 to 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>1</sup> Respondents' AMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' AMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Mental Health Services is defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID) which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes persons with diagnoses resulting in serious functional impairment. SMI estimates from 2008 to 2011 may differ from previously published estimates due to revised estimation procedures. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section D of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Perceived Unmet Need for Mental Health Services is defined as a perceived need for treatment/counseling that was not received. Perception of need was asked of all respondents regardless of disorder status. Respondents with unknown perception of unmet need information were excluded.

<sup>1</sup> Respondents' SMI status for the 2008 NSDUH is determined based on responses to questions on distress (K6 scale) and impairment (World Health Organization Disability Assessment Schedule [WHODAS] for half the sample and Sheehan Disability Scale [SDS] for the other half). Respondents' SMI status for the 2009 and later NSDUHs are based solely on responses to the WHODAS questions because the SDS questions were dropped. For details, see Section B.4.7 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates used in the comparisons may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Estimates for 2005 to 2008 used in the comparisons are based on an adjusted MDE variable and may differ from estimates published in prior NSDUH reports. See Section B.4.8 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) home management, (2) work, (3) close relationships with others, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2008 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year. Respondents with unknown suicide information were excluded.

<sup>1</sup> Due to the use of the 2013 Rural-Urban Continuum Codes in the creation of the county type variables, the 2008 to 2014 estimates may differ from estimates published prior to 2015.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the 2017 National Survey on Drug Use and Health: Methodological Summary and Definitions).

NOTE: Receipt of mental health services for persons aged 12 to 17 is defined as having received treatment/counseling for emotional or behavioral problems not caused by drug or alcohol use. Respondents with unknown receipt of mental health service information were excluded.

NOTE: Respondents could indicate multiple service sources; thus, the response categories are not mutually exclusive.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

<sup>1</sup> Because of revisions in 2013 to Specialty Mental Health Service estimates, these estimates are not comparable with previously published estimates presented before the 2013 NSDUH.

<sup>2</sup> Because of revisions in 2009 to the questions on the Source of Youth Mental Health Education Services, these estimates are not comparable with the education services estimates published prior to the 2009 NSDUH.

<sup>3</sup> A question on receiving Juvenile Justice Youth Mental Health Services was added to NSDUH in 2009 so data are not available prior to 2009.

<sup>4</sup> Respondents who did not report their school enrollment status, who reported not being enrolled in school in the past 12 months, or who reported being home-schooled were not asked about receipt of mental health services from this source; however, respondents who reported not being enrolled in school in the past 12 months were classified as not having received treatment/counseling from this source.

<sup>5</sup> These services were often provided by psychiatrists, psychologists, social workers, or counselors who work for the court system.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Respondents with unknown past year treatment data were excluded.

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Health Professionals include general practitioner or family doctor; other medical doctor (e.g., cardiologist, gynecologist, urologist); psychologist; psychiatrist or psychotherapist; social worker; counselor; other mental health professional (e.g., mental health nurse or other therapist where type is not specified); and nurse, occupational therapist, or other health professional.

<sup>a</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .05 level. Rounding may make the estimates appear identical.

<sup>b</sup> The difference between this estimate and the 2017 estimate is statistically significant at the .01 level. Rounding may make the estimates appear identical.

\* = low precision; -- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

NOTE: Some 2006 to 2010 estimates may differ from previously published estimates due to updates (see Section B.3.5 in Appendix B of the *2017 National Survey on Drug Use and Health: Methodological Summary and Definitions*).

NOTE: Major Depressive Episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. Respondents with unknown past year MDE data were excluded.

NOTE: Impairment is based on the Sheehan Disability Scale (SDS) role domains, which measure the impact of a disorder on a person's life. Impairment is defined as the highest severity level of role impairment across four domains: (1) chores at home, (2) school or work, (3) close relationships with family, and (4) social life. Ratings  $\geq 7$  on a 0 to 10 scale were considered Severe Impairment. Respondents with unknown impairment data were excluded.

-- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>6</sup> Respondents with unknown health data were excluded.

-- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

<sup>1</sup> County Type is based on the 2013 Rural-Urban Continuum Codes.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>1</sup> Estimates in the Total column represent all females in the specified subgroup, including those with unknown pregnancy status.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>6</sup> Pregnant females aged 15 to 44 not reporting trimester were excluded.

-- = not available; da = does not apply; nc = not comparable due to methodological changes; nr = not reported due to measurement issues.

<sup>1</sup> Estimates in the Total column represent all females in the specified subgroup, including those with unknown pregnancy status.

<sup>2</sup> Estimates are based on a definition of Poverty Level that incorporates information on family income, size, and composition and is calculated as a percentage of the U.S. Census Bureau's poverty thresholds. Respondents aged 18 to 22 who were living in a college dormitory were excluded.

<sup>3</sup> Respondents could indicate multiple types of health insurance; thus, these response categories are not mutually exclusive.

<sup>4</sup> CHIP is the Children's Health Insurance Program. Individuals aged 19 or younger are eligible for this plan.

<sup>5</sup> Other Health Insurance is defined as having Medicare, CHAMPUS, TRICARE, CHAMPVA, the VA, military health care, or any other type of health insurance.

<sup>6</sup> Pregnant females aged 15 to 44 not reporting trimester were excluded.
